	TOTAL								2800	93

Exam scheme indicates marks.

Teaching scheme indicates number of hours.

MCA SEMESTER – I

MCA SEMESTER – I
SUBJECT : ALGORITHM DEVELOPMENT AND PROGRAMMING
FUNDAMENTALS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	2	6	5	60	40	25	25	150

A. COURSE OVERVIEW

The course is designed to provide knowledge of programming fundamentals and fundamental constructs of the C programming language. Students will be able to develop logic for creating basic C programs.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Introduction to Program Development Life Cycle, Introduction to Flowchart, Symbols Used in Flowchart, Preparation of Flowchart, Advantages and Limitations of Flowchart, Development of Program Flowchart, Introduction to Pseudo Code. Introduction to Algorithm, Different Ways of Stating Algorithms, Key Features of an Algorithm and the Step-form, Variables, Subroutines, Strategy for Designing Algorithms, Tracing an Algorithm to Depict Logic, Specification for Converting Algorithms into Programs, Structured Programming Concepts.	09	CO1 CO3
[2]	Introduction, Standardizations of C Language, Structure of a Simple C Program, Concept of a Variable in C, Data Types in C, Program Statement, Declarations in C, Memory Storage of Data in Computer, C Tokens, Operators and Expressions in C, Type Conversion in C, Working with Complex Numbers, Basic Screen and Keyboard I/O in C, Non Formatted Input and Output, Formatted Input and Output Functions. Introduction to Compiler – Linker – Preprocessor in C.	10	CO2 CO5
[3]	Specifying Test Condition for Selection and Iteration, Writing Test Expression, Conditional Execution and Selection, Iteration and Repetitive Execution, Which Loop Should be Used?, Goto Statement, Special Control Statements, Nested Loops.	08	CO2 CO3 CO5
[4]	Introduction to Array, One-Dimensional Array, Declaration of a One dimensional Array, Initializing Arrays, Accessing Array Elements, Allowed Operations on Arrays, Internal Representation of Arrays in C, Variable Length Arrays, Working with One-dimensional Array, Strings: One-dimensional Character Arrays, Declaration of a String, String Initialization, Printing Strings, String Input, Character Manipulation in the String, String Manipulation, Introduction to Multidimensional Arrays, Declaration of a Two-dimensional Array, Declaration of a Three Dimensional Array, Initialization of a Multidimensional Array, Unsized Array Initializations, Accessing	10	CO2 CO3 CO5

	Multidimensional Arrays, Working with Two-dimensional Arrays, Understanding Array of Strings its Initialization and Manipulating.		
[5]	Introduction to Functions, Concept of Function, Need of Functions in a Program, Function Prototype Declaration, Function Definition, Function Calling, Call by Value Mechanism, Working with Functions, Passing Arrays to Functions, Concept of Global and Local Variables, Scope Rules, Storage Classes in C, Storage Class Specifiers for Variables, Storage Class Specifiers for Functions, Linkage, Inline Function, Constant Parameters in Functions. Introduction to Recursion, Basic Needs for Implementing Recursion, Implementing Recursion, Comparing Recursion and Iteration.	10	CO2 CO3 CO4 CO5
[6]	Introduction to pointers, Understanding Memory Addresses, Address Operator (&), Declaring a Pointer, Initializing Pointers, Indirection Operator and Dereferencing, Void Pointer, Null Pointer, Use of Pointers, Arrays and Pointers, One-dimensional Arrays and Pointers.	04	CO2 CO3 CO4 CO5
[7]	Introduction to Structures, Declaring Structures and Structure Variables, Accessing the Members of a Structure, Initialization of Structures, Copying and Comparing Structures, typedef and its Use in Structure Declarations, Arrays of Structures and its Initialization, Structures and Pointers, Structures and Functions, Union, Declaring a Union and its Members, Accessing and Initializing the Members of a Union, Structure Versus Union, Introduction to enum Datatype.	05	CO2 CO3 CO4 CO5
[8]	Using Files in C - Declaration of File Pointer, Opening a File, Closing and Flushing Files. Working with Text Files - Character Input and Output, End of File (EOF) Working with Binary Files - Direct File Input and Output, Sequential Versus Random File Access Files of Records - Working with Files of Records, Random Access to Files of Records	04	CO4 CO5

C. TEXT BOOKS

1. Pradip Dey and Manas Gosh, *Programming in C*; 2nd ed.; Oxford Publication.

D. REFERENCE BOOKS

1. V. K. Kapoor, *Introduction to Computer Data Processing and System Analysis*; Sultan Chand and Sons Publication.
2. Brian W. Kernighan and Dennis Ritchie, *C Programming Language*; 2nd ed.; Prentice Hall Publication
3. K. R. Venugopal, *Mastering C*; Tata McGraw Hill Publications.
4. Pradip Dey and Manas Gosh, *COMPUTER FUNDAMENTALS AND PROGRAMMING IN C* Second Edition; Oxford Publication.

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Apply	Develop algorithms and flowcharts for a given problem.
CO2	Understand	Demonstrate programming fundamentals.
CO3	Apply	Interpret algorithms and Pseudocode to generate computer programs in C language.
CO4	Create	Develop modular programs for given basic problems.
CO5	Apply	Debug basic computer programs written in C language.

F. COURSE MATRIX

MCA SEMESTER – I
SUBJECT : DATABASE MANAGEMENT SYSTEM

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	2	6	5	60	40	25	25	150

A. COURSE OVERVIEW

The purpose of this course is to provide fundamentals of database management system focusing on how to create, organize and maintain structured information in database. The course covers in-depth knowledge of Entity-Relational model, Normalization, Relational model, Relational algebra as well as essential Transaction Processing concepts. It also includes PL/SQL programming concepts.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Database System Applications, Database Systems versus File Systems, View of Data, Database Languages, Database Design, Data Storage and Querying,, Transaction Management, Database System Structure, Database Users and Administrators , History of Database Systems.	04	CO1
[2]	Overview of Design Process, Entity Relationship Model, Constraints, E-R Diagrams, E-R Design Issues: Entity set vs Attributes, Binary vs N-ary Relationship set, Relationship Attributes, Reduction to Relational Schema, Extended E-R Features	06	CO2
[3]	Structure of Relational Databases, Keys, Fundamental Relational Algebra Operations, Additional Relational Algebra Operations, Extended Relational Algebra Operations	06	CO3
[4]	Overview of SQL Query Language ,SQL Data Definition, Basic Datatypes, Schema design, Insert Values, SQL Select query, SQL Alteration of Schema, SQL Modification of Data, SQL built-in Functions, SQL Aggregation, SQL Nested Subquery, SQL Join Expression	09	CO3
[5]	Feature of Good Relational Design, keys, Functional Dependency Theory, Normal Forms, Multivalued Dependency, Decomposition using Multivalued Dependency	06	CO2
[6]	Overview of Physical Storage Media, RAID, Storage Access, File Organization, Organization of Records in Files, Data Dictionary Storage	04	CO1
[7]	Basic Concepts, Ordered Indices, B+ Tree Index Files, B-Tree Index Files, Static Hashing, Dynamic Hashing, Comparison of Ordered Indexing and Hashing, Multiple Key Access	08	CO5
[8]	Transaction Concept, Simple Transaction Model, Transaction Atomicity and Durability, Transaction Isolation, Serializability Concept, Transaction Isolation and Atomicity	05	CO6
[9]	Centralized and Client Server Architectures, Server System Architectures, Introduction to Parallel Systems and Distributed	03	CO1

	Systems, and Network Types		
[10]	Basic structure of PL/SQL block, Loops and Control Statements in PL/SQL blocks, Triggers in PL/SQL, Stored Procedure, Stored Functions , Cursor in PL/SQL block, Error handling in PL/SQL block	09	CO4

C. TEXT BOOKS

1. Abraham Silberschatz, Henry F.Korth and S.Sudarshan, *Database System Concepts* ; 6th ed ; McGraw Hill Publication
2. Joel Murach, Mike Murach & Associates , *Murach's MySQL* 3rd ed;

D. REFERENCE BOOKS

1. Carlos Coronel, Steven Morris, Peter Rob, *Database Systems : Design, Implementation and Management*; Cengage Learning
2. Ramez Elmsari, Shamkant B Navathe, *Fundamentals of Database Systems*; 7th ed ;Pearson Education
3. S K Singh, *Database Systems : Concepts, Design and Applications* ; Pearson Education
4. www.mysqltutorial.org

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Describe building blocks, File Organization, Storage Media and importance of database management system
CO2	Analyse	Design robust relational database for a given problem
CO3	Apply	Construct relational database for a given problem
CO4	Apply	Demonstrate usage of procedural language in relational database environment.
CO5	Apply	Illustrate different indexing techniques
CO6	Understand	Explain transaction concepts

F. COURSE MATRIX

MCA SEMESTER – I
SUBJECT : WEB DESIGNING

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	2	6	5	60	40	25	25	150

A. COURSE OVERVIEW

The course helps in creating effective web pages, including in-depth consideration of information architecture using HTML5, CSS and Javascript. Use various CSS layouts and models for responsive web design. Develop basic programming skills using Javascript for writing dynamic pages.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Introduction to HTML5, Understanding Basic Structure of HTML5 Document, Strict and Loose Type HTML5 Document, Validating HTML Document, Understanding DOCTYPE Element, Root Elements, Metadata Elements, Section Elements, Heading Elements, Introduction to Flow Elements, Introduction to Phrasing Elements, Introduction to Embedded Elements, Introduction to Interactive Elements.	08	CO1 CO2 CO4
[2]	Text Formatting with Physical Style Elements, Text Formatting with Logical Style Elements, Character Entities in HTML5, PRE Element, DIV Element, SPAN Element, Tables Element, Lists, Hyperlinks.	08	CO1 CO2 CO4
[3]	Inserting Image in a Web Page, Image Map, Introduction to Canvas, Exploring FORM Element, Observing Various INPUT Elements, Button Element, Progress Element, Meter Element, Output Element, Datalist Element, Textarea Element, Label Element, Select Element, Option Element, Optgroup Element, Submitting a Form, Details and Summary Element, Time Element, KBD Element, Video Element, Audio Element, Object Element, Figure and Figcaption Element. Introduction to Editable Content and Checking Spelling Mistakes, customdata attributes, Introduction to client side storage, Introduction to drag and drop, Introduction to geolocation API	10	CO1 CO2 CO4
[4]	Evolution of CSS, Syntax of CSS, Exploring CSS Selectors, Inserting CSS in an HTML Document, Exploring Background of Webpage using CSS, Exploring Color and Gradient Properties in CSS, Exploring Font Properties in CSS, Exploring Padding and Margin Properties in CSS, Exploring Border Properties in CSS, Controlling the Display of an Element using CSS, Positioning of Element using CSS, Floating and Element using CSS Exploring Different Model in CSS – Box Model, Template Layout Model, Multi- Column Model. Exploring different types of effects in CSS - Opacity, Transition,	10	CO1 CO2 CO3 CO4

	Transformation, Animation		
[5]	Introduction to Java Scripting and <script>, Client-Side JavaScript, Advantages of JavaScript, Limitations of JavaScript, Placement of Script, JavaScript Data Types, JavaScript Variables, JavaScript Variable Scope, JavaScript Variable Names, JavaScript Reserved Words, Operators in JS, Control Statements in JAVASCRIPT, Introduction to Java Script Functions, Hoisting in Javascript, Introduction to Java Script Events, Introduction to Java Script Built-in Objects, Localization in HTML Document via JS and CSS. Introduction to Arrays in Javascript, Introduction to Objects in Javascript, Introduction to Classes and Modules in Javascript.	16	CO1 CO2 CO3 CO4
[6]	Introduction to Document Object in JS, Introduction to Cookies, Introduction to Document Object Model - Nodes and Levels, Verify type of nodes and its child nodes, Change Element value, Count nodes, adding and inserting nodes. Introduction to Browser Control using JS, Introduction to Form Validation using JS, Exploring errors and handling exceptions in validation	08	CO1 CO2 CO3 CO4 CO5

C. TEXT BOOKS

1. DT Editorial Service, *HTML 5 Black Book*; 2nd ed.; Dreamtech Press Publication
2. David Flanagan. JavaScript: The Definitive Guide 6E; O'Reilly Publications. (latest is 7E)

D. REFERENCE BOOKS

1. Will Train, *HTML 4.0*; BPB Publication.
2. Rob Crowther, Joe Lennon, Ash Blue and Greg Wanish, *HTML5 in Action*; Manning Publication
3. Mark Pilgrim, *HTML5 Up and Running - Dive into the Future of Web Development*; 5th ed.; O'Reilly Media Publication
4. A Smarter Way to Learn JavaScript The new approach that uses technology to cut your effort in half
5. Eloquent JavaScript, 3rd edition Marijn Haverbeke

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Express importance of building blocks for consistent and robust web design.
CO2	Apply	Design and Develop consistent, attractive and animated web pages
CO3	Apply	Validate user input in web pages.
CO4	Create	Create interactive web sites individually and in teams.
CO5	Create	Create scripted web pages using Javascript.

MCA SEMESTER – I
SUBJECT : COMPUTER ORGANIZATION AND ARCHITECTURE

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	0	4	4	60	40	25	0	125

A. COURSE OVERVIEW

This course is intended to teach the basics involved in data representation and digital logic circuits used in the computer system. It covers the general concepts of digital logic design, including logic elements, and their use in combinational and sequential logic circuit design. Provide insights in basic architecture of processing, memory and i/o organization in a computer system.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Generation of Computers, Analog and Digital Computer, Block Diagram of Computer, Positive and Negative Numbers, Integers and Reals, Number Systems: Binary, Octal, Decimal and Hexadecimal, Binary Addition, Subtraction, Multiplication and Division, r's and (r-1)'s Complement, Conversion from One System to Another, Characters and Codes ASCII, EBCDIC, UNICODE, Redundant Coding for Error Detection and Correction (Parity and Hamming Code)	9	CO1 CO2
[2]	Basic Gates & its Truth Tables, Boolean Algebra: Fundamental Concepts, Basic Theorem and Properties, Boolean Functions Canonical and Standard Forms, Sum of Product, Product of Sum, K-map Method, Don't Care Condition, Combination Circuit Design with Gates, Universal Gates Functionality.	11	CO1 CO3 CO4
[3]	Block Diagram of ALU, Binary Half and Full Adder, Decimal Adder, Binary Parallel Adder, BCD Adder, Half and Full Subtractor, Multilevel NAND Circuits, Multilevel NOR Circuits.	6	CO1 CO3 CO4
[4]	Encoder, Decoder, Multiplexer, Demultiplexer.	5	CO3 CO4
[5]	Flip Flops: RS, D, T, JK, Asynchronous, Synchronous and Master Slave, Shift Registers, Bidirectional Shift Register with Parallel Load Counters: Synchronous and Ripple Counter, Simple Arithmetic and logic Circuits.	10	CO3 CO4
[6]	Memory Hierarchy, Random Access Memory, Read Only Memory, Serial Access Memory, Direct Access Memory, Cache Memory and Overview of Virtual Memory and Auxiliary Memory.	6	CO5
[7]	Introduction to 8085 Microprocessor, 8085 Hardware Model, Programmable Registers, Instruction Format, Addressing Modes- Direct, Indirect, Immediate, Relative, Indexed, Addressing Formats: Zero, Single, Double, Register etc., Instruction Set, Instruction Execution, Fetch and Execution Cycles, RISC Architecture, CISC Architecture, Design Principles for Modern Computers.	7	CO1 CO5
[8]	Peripheral Devices, Properties of Simple I/O Devices and Their Controllers, Asynchronous Data Transfer, Handshaking, Data Transfer Modes, Programmed I/O, Interrupted I/O, DMA, Transfer of	6	CO5

	Information between I/O Devices, CPU and Memory.		
--	--	--	--

C. TEXT BOOKS

1. M. Morris Mano, *Digital Logic and Computer Design*; 2nd ed.; PHI
2. Ramesh S. Gaonkar, *Microprocessor Architecture, Programming and Applications with 8085*; 4th Ed.; Penram International Publishing PVT. LTD.
3. Andrew S. Tanenbaum, Todd Austin, *Structured Computer Organization*; 6th ed.; Pearson

D. REFERENCE BOOKS

1. M Morris Mano, *Computer System Architecture*; 3rd ed.; PHI
2. William Stallings, *Computer Organization and Architecture*; 6th ed.; PHI
3. Andrew S Tanenbaum, *Structure Computer Organization* ; 4th ed.; Pearson Education

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Describe role of various elements of computer organization and architecture.
CO2	Apply	Use various number systems for representation of data.
CO3	Apply	Derive boolean expression and digital circuit from a given logic design problem.
CO4	Understand	Interpret combinational and sequential logic circuit design.
CO5	Understand	Explain microprocessor architecture, I/O architecture and memory hierarchy.

F. COURSE MATRIX

MCA SEMESTER – I
SUBJECT : COMMUNICATION SKILLS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme			
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac
-	-	2	2	1	-	-	-	25

A. COURSE OVERVIEW

The course is intended to familiarize students with the basics of English language and help them to learn to identify language structures for correct English usage. To enable the students to adopt strategies for effective reading and writing skills. It helps students to carry out day to day communication at the work place by adequate understanding of various types of communication to facilitate efficient interpersonal communication.

B. COURSE CONTENT

NO	TOPIC	Prac	COs
[1]	Understanding Common Grammar Errors	4	CO1 CO3
[2]	Communication at Organisation Non-verbal Communication: Significance and Forms, Elements of Non- verbal Communication. Cross-cultural Communication: Concept, Different Communication Styles and Strategies. Technology-enabled Business Communication: Tools, Impact, Effectiveness. Self Presentation, Formal Presentations	8	CO2 CO3 CO5
[3]	Types of Written Communication: Formal Letter, Notice, Circular, Memo, E-mail, Proposal, and Report Resume: Format, Types, Video Resumes, Send Resumes, Online Recruitment: Process and Techniques. Electronic Resume-HTML	8	CO3 CO5
[4]	Interviews: Principles, General Preparations, Follow up, Questions Group Discussion: Planning and Preparation, Steps.	4	CO3 CO4 CO5

C. TEXT BOOKS

1. Meenakshi Raman and Prakash Singh, *Business Communication*; Oxford University Press
2. Meenakshi Raman and Sangeeta Sharma, *Technical Communication*; Oxford University Press

D. REFERENCE BOOKS

1. Sangeeta Sharma & Vinod Mishra , *Communication Skills for Engineers and Scientists*; PHI
2. William Sanborn Pfeiffer and T. V. S. Padmaja, *Technical Communication*; Pearson

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Apply	Effectively use tenses and conditional sentences.
CO2	Analyze	Identify various means of professional communication.
CO3	Apply	Practice effective business writing and correspondence.
CO4	Apply	Exercise interviews and group discussion practices.
CO5	Apply	Enhance Professional Skills

Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	100

A. COURSE OVERVIEW

The course aims to provide understanding of computer networks and data communication. It covers various networking devices, layered task and Open Systems Interconnection (OSI) model. The course also introduces the learners to functionalities of various layers of OSI model.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	<u>Introduction</u> Data Communications, Networks: Network Criteria, Physical Structures like Types of connections, Topologies, Types of Networks and Network Models, The Internet, Protocols and Standards, Layered Tasks, The OSI Model, Layers in The OSI Model, TCP/IP Protocol Suit, Addressing.	08	CO1 CO5
[2]	<u>Physical Layer</u> Analog and Digital Data, Analog and Digital Signals, Periodic and Non-periodic Signals, Periodic Analog Signals, Digital Signals: Bit Rate, Bit Length, Transmission Impairment: Attenuation, Distortion, Noise, Data Rate Limits, Performance: Bandwidth, Throughput, Latency, Jitter. Digital-To-Analog Conversion, Analog-To-Analog Conversion, Multiplexing: Frequency-Division Multiplexing, Wavelength-Division Multiplexing Guided Media: Twisted-Pair Cable, Coaxial Cable, Fibre-Optic Cable, Unguided Media: Radio Waves, Microwaves, Infrared.	10	CO2 CO3
[3]	<u>Data Link Layer</u> Error Detection and Correction: Types of Errors, Redundancy, Detection versus Correction, Forward Error Correction versus Retransmission, Coding, Block Coding: Error Detection, Error Correction, Hamming Distance, And Minimum Hamming Distance, Cyclic Redundancy Check, Checksum: One's Complement, Internet Checksum, Framing: Fixed and Variable Size Framing, Flow and Error Control, Noiseless Channels: Simplest and Stop-and-Wait, Noisy Channels: Stop-and-Wait Automatic Repeat Request, Go-back-N Automatic Repeat Request Connecting Devices: Passive Hubs, Repeaters, Active Hubs, Bridges, Two-Layer Switches, Routers, Three-Layer Switches, Gateway.	12	CO2 CO3
[4]	<u>Network Layer</u> IPv4 Addresses: Address Space, Notations, Classful Addressing, Classless Addressing, Network Address Translation (NAT) IPv4: Segment Header Format, Datagram, Fragmentation, Checksum, and Options IPv6: Advantages, Packet Format, and Extension Headers, Forwarding Techniques, Forwarding Process, And Routing Table. Introduction to Unicast and Mul-	10	CO2 CO3 CO4

	unicast routing.		
[5]	<u>Transport Layer</u> Process-To-Process Delivery: Client/Server Paradigm, Multiplexing and Demultiplexing, Connectionless Versus Connection-Oriented Service, Reliable Versus Unreliable User Datagram Protocol (UDP): Well-Known Ports for UDP, User Datagram Checksum, UDP Operation, Use of UDP, TCP Services, TCP Features, Segment, Segment Header Format, A TCP Connection, Flow Control, Error Control, Congestion, Congestion Control, Quality of Service, Techniques to improve QoS.	80	CO3
[6]	<u>Application Layer</u> Name Space: Flat Name Space, Hierarchical Name Space Domain Name Space, Distribution of Name Space: Hierarchy of Name Servers, Zone, Root Server, Primary and Secondary Servers DNS in the Internet: Generic Domains, Country Domains, Inverse Domain, Resolution: Resolver, Mapping Names to Addresses, Mapping Address to Names, Recursive Resolution, Iterative Resolution, Caching, DNS Messages and Types of Records Introduction to Telnet, Overview of E-Mail, SMTP, FTP, WWW, HTTP	12	CO3 CO6

C. TEXT BOOKS

1. Behrouz Fourouzan. *Data Communication and Networking; 4th ed.*; Tata McGraw-Hill Publications

D. REFERENCE BOOKS

1. Andrew S. Tanenbaum. *Computer Networks*; Prentice Hall Publications

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Understand Networking fundamentals, types of networks and connections
CO2	Apply	Practice Signals, error detection, correction and IP addressing
CO3	Understand	Interpret functionalities of OSI model layers
CO4	Apply	Illustrate use of IPv4 and IPv6 in computer networks
CO5	Understand	Design simple computer networks
CO6	Understand	Explain different protocols used at application layer i.e. HTTP, FTP, TELNET and WWW

MCA SEMESTER – I
SUBJECT: MANAGEMENT INFORMATION SYSTEMS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	25-	-	125

A. COURSE OVERVIEW

The course is intended to describe the role of information systems in business management. It covers the fundamentals of decision support systems and Enterprise Systems including E-commerce for business and explain the ethical and societal issues related to information systems. To train the students to develop the basic understanding of how ERP enriches the business organizations in achieving a multidimensional growth.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Organizations and Information Systems, Impact of Information Systems on Organizations and Business Firms, Using Information Systems to Achieve Competitive Advantage Management Information System in a Digital Firm: Concept, Definition, Role of MIS, Impact of MIS, MIS and User, MIS as a Control System, MIS A Support to the Management, Management Effectiveness and MIS, Organization as System.	06	CO1
[2]	Introduction, Infrastructure Components, Contemporary Hardware Platform Trends, Management Issues, Dealing with Platform and Infrastructure Change, Management and Governance, Making Wise Infrastructure Investments Development of Long Range Plans of the MIS, Ascertaining the Class of Information, Determining the Information Requirement, Development and Implementation of MIS, Management of the Information Quality in the MIS, Organisation for Development of MIS, MIS: Development Process Model	05	CO1 CO2
[3]	Applications in Manufacturing Sector: Personnel Management, Financial Management, Production Management, Raw Materials Management, Marketing Management, Corporate Overview Applications in Service Sector: Introduction, Creating a Distinctive Service, Service Concept, Service Process Cycle and Analysis, Customer Service Design, Service Management System, MIS Applications in Service Industry.	08	CO1 CO3
[4]	Concept of Decision Support Systems (DSS), DSS Models, Group Decision Support Systems, AI System, Knowledge based Expert System, DSS Application in E-enterprise, MIS and the Benefits of DSS.	08	CO1
[5]	Enterprise Systems, Enterprise Software and Business Value, Supply Chain Management Systems and its Applications, Global Supply Chains and Internet, Business Value of Supply Chain Management Systems E-Commerce: E-Commerce and the Internet, E-Commerce: Business and Technology, The Mobile Digital Platform and Mobile E-Commerce, Building an E-Commerce Web Site.	10	CO1 CO5

[6]	Understanding Ethical and Social Issues Related to Systems, Ethics in an Information Society, The Moral Dimensions Of Information Systems.	05	CO4
[7]	Case Studies Relevant to the Topics.	06	CO1 CO2 CO3 CO4 CO5
[8]	Evolution of ERP, What is ERP?, Reason for the Growth of the ERP Market, Advantages of ERP, Why do many ERP Implementations Fail?, Why are ERP Packages being used now? Finance Sales and Distribution, Manufacturing Human Resources, Plant Maintenance, Quality Management, Purchasing, Marketing, Production Planning, Materials Management. Benefits of ERP: Reduction of Lead Time, On Time Shipment, Reduction in Cycle Time, Improved Resource Utilization, Better Customer Utilization, Improved Supplier Performance.	12	CO3, CO5

C. TEXT BOOKS

1. Waman S. Jawadekar, *Management Information Systems Texts and Cases*; 5th ed.; Tata McGrawHill Education Pvt. Ltd.
2. Alexis Leon, *Enterprise Resource Planning*; Tata McGraw Hill
3. Kenneth C Laudon and Jane P Laudon, *Management Information System*; 12th ed.; PHI, New Delhi.

D. REFERENCE BOOKS

1. S. Sadagopan, *Management Information Systems* ; PHI, New Delhi
2. Sanjay Mahapatra, *Cases in Management Information Systems*; PHI, New Delhi
3. Uma G. Gupta, *Management Information Systems*; Galgotia Publications
4. Alexis Leon, *ERP Demystified*; 2nd ed.; McGraw-Hill Education (India) Ltd., 2007

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Interpret the Role and Applications of Information Systems in Business Management.
CO2	Understand	Express Relationships Between Information Systems, Organization, Management and Strategy.
CO3	Understand	Explain the importance of information quality and the development process of MIS. Describe steps and activities in the ERP life cycle.
CO4	Understand	Summarize ethical aspects of the information system in professional practices and social issues.
CO5	Evaluate	Evaluate the applicability of relevant IT infrastructure in management of various business processes.

MCA SEMESTER – I
SUBJECT: DISCRETE MATHEMATICS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	100

A. COURSE OVERVIEW

This course focuses on fundamental concepts of discrete mathematics and its applications in computer science. Topics include logic, sets theory, probability, relation & functions, graph theory and group theory. It will help the learners to think logically for solving mathematical problem.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Definition of Sets, Venn Diagrams, Types of set, Finite, Infinite, Power, Countable and Uncountable Sets, Operations on Sets, Mathematical Induction, Principles of Inclusion and Exclusion, Propositions, Tautology and Contradiction	10	CO1 CO2
[2]	Rules of Sums and Products, Permutations, Permutation with Repetition of Objects, Restricted Permutation, Circular Permutation, Combinations, Restricted Combinations, Combinations with Repetition, Difference between Permutation and Combination. Probability: Important Definition, Theorems, Conditional Probability.	10	CO4
[3]	Relation: Definition, Domain and Range of Relation, Kinds of Relation, Types of Relation, Composition of Relations, Partial Ordering and Equivalent Relation Functions: Definition and Types of Functions, Composition of functions, Inverse of a Function and Pigeon-hole Principle.	12	CO3
[4]	Basic Terminology, Multi- and Weighted Graphs, Paths, Circuits, Eulerian Path, Traveling Salesman Problem, Isomorphic Graphs, Factors of a Graph, Planar Graphs, Operations on a Graph Trees, Rooted Trees, Path Length, Prefix Codes: Generation , Application, Spanning Trees, Transport Networks Using Ford-Fulkerson	14	CO5
[5]	Groups and Sub-Groups, Evaluation of Powers, Cosets, Lagrange's Theorem, Permutation Group and Burnside's Theorem, Group, Codes, Isomorphism, Automorphism, Homomorphism, Normal Subgroups, Rings, Integral Domains and Fields, Rings.	14	CO1

C. TEXT BOOKS

1. S. K. Chakraborty and B. K. Sarkar, *Discrete Mathematics*; Oxford University Press
2. Rosen K. H., *Discrete Mathematics and its Applications*; 7th ed.; Tata McGraw-Hill Pub. Co. Ltd.

D. REFERENCE BOOKS

1. Birkoff and Bartee, *Modern Applied Algebra*; McGraw-Hill, CBS
2. Stephen A. Wiitala., *Discrete Mathematics A Unified Approach*; Computer Science Series, McGraw-Hill

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Understand fundamentals of set theory and group theory.
CO2	Apply	Interpret propositions for given truth value.
CO3	Understand	Compare usage of relations and functions.
CO4	Apply	Solve relevant given problems using counting techniques.
CO5	Apply	Use graph theory for solving relevant mathematical problems.

F. COURSE MATRIX

MCA SEMESTER – I
SUBJECT: COMPUTER ORIENTED NUMERICAL & STATISTICAL METHODS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	100

A. COURSE OVERVIEW

The course is intended to make the learner understand and use various concepts of numerical and statistical methods for solving relevant real life problems. It enables the learner to gain fundamentals of probability distributions, testing of hypotheses. It makes the learner solve numerical integration, algebraic/transcendental, ordinary differential equations and interpolation function.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Introduction & Scope of Statistics, Scales of Measurements, Collection of data, Frequency Distribution (F.D.). Arithmetic Mean, Geometric Mean, Harmonic Mean, Median and Mode.	12	CO1 CO3
[2]	Mean Deviation, Standard Deviation, Coefficient of Variation, Coefficient of Skewness : Karlpearson's& Bowley's.	08	CO2 CO3
[3]	Introduction Probability, Addition Theorem – Examples, Multiplication Theorem – Examples, Conditional Probability Examples, Bayes theorem Examples	07	CO3
[4]	Random Sampling, Test of Hypothesis. Test of Significance of Attributes, Test of Significance of Variables for Large Samples and Small Samples.	09	CO3 CO4
[5]	Solution of Algebraic and Transcendental Equations: Bisection, False-Position, Newton-Raphson Methods Numerical Solution of Ordinary Differential Equations: Euler's Methods and Runge-Kutta (2nd and 4th) Methods.	10	CO3 CO6
[6]	Polynomial interpolation, difference tables, Newton forward and backward Interpolation formula, Extrapolation, Divided Differences, Lagranges formula, Newton's Divided Difference Formula, Inverse Interpolation. Trapezoidal rule, Simpson's 1/3 and 3/8 Rules.	14	CO3 CO5

C. TEXT BOOKS

1. S S Sastry, *Introductory Methods of Numerical Analysis*; 4th ed.; PHI Learning Pvt. Ltd.
2. S. P. Gupta, *Statistical Methods*; Sultan Chand & Sons

MCA SEMESTER – II

MCA SEMESTER – II
SUBJECT : SOFTWARE ENGINEERING AND TESTING

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	2	6	5	60	40	25	25	150

A. COURSE OVERVIEW

This course describes software engineering approaches and principles. Learners will gain knowledge of various software process models as well as phases of software development to impart a way of thinking about real world information system design problems and their solutions using various UML models. It covers various phases of the software testing life cycle enabling the learners to use various testing techniques. It introduces knowledge of various quality measures for software and development processes. The course also includes agile development and testing approaches used for software development.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Evolution an Engineering Discipline, A solution to the Software Crisis, Software Development Projects, Types of Software Development Projects, Exploratory Style of Software Development, Perceived Problem Complexity, Principles Deployed by Software Engineering to Overcome Human Cognitive Limitations, Emergence of Software Engineering, Early Computer Programming, High-level Language Programming, Control Flow-based Design, Data Structure-oriented Design, Data Flow-oriented Design, Object-oriented Design, Notable Changes in Software Development Practices.	05	CO1
[2]	Waterfall Model and its Extensions - Classical Waterfall Model, Iterative Waterfall Model, V-Model, Prototyping Model, Incremental Development Model, .Evolutionary Model. Rapid Application Development (RAD), Working of RAD, Applicability of RAD Model, Comparison of RAD with Other Models. Spiral Model, Phases of the Spiral Model, A Comparison of Different Life Cycle Models, Selecting an Appropriate Life cycle Model for a Project. Agile Development Models, Essential Idea behind Agile Models, Agile versus Other Models, Extreme Programming Model, Scrum Model.	06	CO1
[3]	Software Project Management Complexities, Responsibilities of a Software Project Manager, Project Planning - Sliding Window Planning, The SPMP Document of Project Planning. Metrics for Project Size Estimation - Lines of Code (LOC), Function Point (FP) Metric. Project Estimation Techniques - Empirical Estimation Techniques	06	CO1 CO3

	<p>[Expert Judgement, Delphi Cost Estimation], Heuristic Techniques [COCOMO], Analytical Estimation Techniques [Halstead's Software Science].</p> <p>Scheduling - Work Breakdown Structure, Activity Networks, Critical Path Method (CPM), PERT Charts, Gantt Charts.</p> <p>Organization and Team Structures, Staffing and its Estimation, .Risk Management, .Software Configuration Management</p>		
[4]	Requirements Gathering and Analysis, Software Requirements Specification (SRS), Formal System Specification.	06	CO1 CO2
[5]	<p>Overview of the Design Process, .Characterize a Good Software Design, Cohesion and Coupling, Layered Arrangement of Modules, Approaches to Software Design.</p> <p>Function-Oriented Software Design - Overview of SA/SD Methodology, Structured Analysis</p>	03	CO1 CO2
[6]	<p>The Importance of Modeling. Object-Oriented Modeling and Principles, An Overview and Conceptual Model of UML.</p> <p>Object Modelling Using UML - Basic Object-Orientation Concepts, .Unified Modelling Language (UML), UML Diagrams, Use Case Model, Class Diagrams, Interaction Diagrams, Activity Diagram, State Chart Diagram, Package, Component, and Deployment Diagrams, UML 2.0</p> <p>Object-Oriented Software Development - Patterns, Some Common Design Patterns, Introduction to Object-Oriented Analysis and Design (OOAD) Methodologies [<i>Unified Process, Overview of The OOAD Methodology, Use Case Model Development, Domain Modelling, Identification of Entity Objects, Booch's Object Identification Method, Interaction Modelling, Class-Responsibility-Collaborator (CRC) Cards</i>], Applications of the Analysis and Design Process</p>	08	CO2
[7]	<p>Coding Standards and Guidelines, Code Review[Code Walkthrough, Code Inspection, Clean Room Testing], Software Documentation, Verification, Verification of Requirements, High-level and Low-Level Design, How to Verify Code?</p> <p>Validation, Validation Activities: Unit Testing, Integration Testing, Function Testing, System Testing, Acceptance Testing, Overview of Regression Testing</p> <p>Introduction to Testing, Effective and Exhaustive Testing, Software Testing Life Cycle (STLC), Definition and Goals of Testing, Black-box Testing [Equivalence Class Partitioning, Boundary Value Analysis], White-Box Testing [Basic Concepts, Statement Coverage, Branch Coverage, Multiple Condition Coverage, Path Coverage, McCabe's Cyclomatic Complexity Metric, Data Flow-based Testing, Mutation Testing], Debugging, Introduction Program Analysis Tools - Static and Dynamic, Integration Testing, Testing Object-Oriented Programs,</p>	10	CO4

	Smoke Testing. Issues in OOT, Issues in testing Inheritance, Various OO Testing Techniques. Test Organization, Structure of Testing Group, Test Planning, Detailed Test Design and Test Specifications.		
[8]	Agility and Cost of Change, Agile Process, Extreme Programming, Introduction to Agile Process Models: Adaptive Software Development, Dynamic Systems Development Method, Scrum, Crystal, Feature Driven Development, Lean Software Development, Agile Modeling, Agile Unified Process, Advantages and Disadvantages of Agile. Agile Requirements Abstraction Model, Requirements Management in Agile Environment, Agile Requirements Prioritization, Agile Requirements Modeling and Generation, Collaborative User Story Creation.	05	CO5
[9]	Agile Testing – Principles, Methods & Advantages, Agile Testing Quadrants: the Purpose of Testing, Technology- Facing Tests that Supports the Team, Overview of Agile Testing Methods: Test Driven, Acceptance Test Driven, and Behaviour Driven Development.	05	CO5
[10]	Need for Automation, Categorization of Testing Tools, Selection of Testing Tools, Cost Incurred in Testing Tools, Guidelines for Automated Testing, Overview of some Commercial Testing Tools.	03	CO6
[11]	Software Reliability, Software Quality, Software Quality Management System, ISO 9000 certification, SEI Capability Maturity Model, Software Process Improvement and Capability Determination (SPICE), Personal Software Process (PSP), Six Sigma.	03	CO6

C. TEXT BOOKS

1. Fundamentals of Software Engineering, Fourth Edition, Rajib Mall, PHI Publication
2. "Agile Software Development, Principles, Patterns and Practices", by Robert C. Martin, Prentice Hall
3. "Agile Testing – A Practical Guide For Testers And Agile Teams", by Lisa and Janet

D. REFERENCE BOOKS

4. "Software Testing Principles and Practices" by Naresh Chauhan, Oxford Publication
5. "The Unified Modeling Language User Guide" by Grady Booch, James Rumbaugh, and Ivar Jacobson. Low Price Edition, Pearson Education
6. "Software Engineering A practitioner's Approach", 6th Edition, by Roger Pressman McGraw-Hill International Edition

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Describe the importance of software engineering approaches, principles, models and processes.
CO2	Create	Prepare robust software design using UML for given system requirements individually and in team.
CO3	Apply	Calculate basic estimates for project planning
CO4	Apply	Understand software testing life cycle and efficiently use modern testing techniques and tools to test software.
CO5	Understand	Demonstrate Agile software development and testing.
CO6	Understand	Understand significance of Automation tools, software reliability and quality measures for lifelong software practices

Operators: Arithmetic, Assignment, Relational, Logical, Boolean, Bitwise, Membership, Identity. Input & Output statements, Command line arguments. Control Statements: if, else, elif, while, for, break, continue, pass, assert, return.	06	CO1 CO2
[2]	List: create, update, delete elements, list methods, indexing and slicing. Tuple: create, basic operations, functions to process tuple. Dictionary: create, update, delete elements, dictionary methods.	08	CO1 CO2
[3]	Difference between Function and Method, Create and Use Function, Return Multiple Results from Function, Pass by Object Reference. Arguments: Positional, Keyword, Default, Variable length. Local and Global Variables, Global Keyword, Passing group of Elements to Function. Anonymous Functions: Using Lambdas with: filter(), map() and reduce()	10	CO1 CO2
[4]	Create Class and its Objects, Self variable, Constructor, Destructor, Instance methods, Class methods, Static methods. Inheritance: Constructors in Inheritance, Overriding Super Class Constructors and Methods, super(), Method Overloading and Overriding.	08	CO1 CO2
[5]	Types of Errors, Exceptions, Handling Exceptions, Types of Exceptions, Assert and Except Statements, User defined exceptions.	04	CO1 CO3
[6]	Introduction, Working with MySQLdb module, Establish connection, Create database and table, CRUD operations, Invoke stored procedure.	06	CO1 CO3
[7]	Introduction: single and multitasking, Difference between Process and Thread. Create Thread: Without Using a Class, Using a Thread Class. Thread Class Methods, Single Tasking Using a Thread, Multitasking Using Multiple Threads. Thread Synchronization, Communication between Threads.	06	CO1 CO3
[8]	numpy arrays: zeros(), ones(), reshape(), hstack(), vstack(), arange(), linspace(), logspace(), asarray(), dot(), matmul(), indexing and slicing.	06	CO1 CO2

	pandas: Work with Series and Dataframe: create, delete rows and columns, index and select data, handle missing data, methods and functions. Matplotlib: Plotting- bar chart, pie chart, area chart, line chart, histogram.		CO3
[9]	Django Introduction, Setup environment, Create project, Life Cycle, Admin Interface, Create Views, Models, Page Redirection, Process Form.	06	CO1 CO6

2. John V Guttag. *Introduction to Computation and Programming Using Python; 6th edition*; Prentice Hall of India
3. Sanjeev Jaiswal and Ratan Kumar. *Learning Django Web Development*; PACKT

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Describe role of Python language constructs
CO2	Apply	Implement object-oriented applications
CO3	Apply	Develop general purpose and scientific applications with or without backend database support
CO4	Apply	Plot diversified charts
CO5	Create	Create basic web applications

MCA SEMESTER – II

SUBJECT : SEMINAR RESENTATION

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
-	-	2	2	1	-	-	-	25	25

A. COURSE OVERVIEW

The course aims to develop learners' communication, presentation and report writing skills lifelong. It enables the learner strengthen and practice discussion abilities, develop internet research skills, increase vocabulary, improve reading and listening comprehension & build confidence for oral communicative purposes.

B. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Independently explore and identify a suitable technological topic.
CO2	Understand	Find relevant literature for a given technological topic individually and in a team.
CO3	Analyse	Perform detailed literature review on the identified topic to pursue lifelong learning.
CO4	Create	Summarise literature and Prepare detailed informative report individually and in a team based on the reviewed literature.
CO5	Create	Prepare an effective presentation.
CO6	Apply	Deliver presentation to the individuals and groups to practice lifelong in a professional environment.

SUBJECT: SYSTEM ANALYSIS DESIGN AND MANAGEMENT

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	125

A. COURSE OVERVIEW

The course covers various stages of information system development life cycle. It also emphasizes on analytical techniques to develop analysis and design solutions for business problems and user requirements. It enables the learners to understand essential concepts of Project Management and cost estimation.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Overview of Information System, Information Technology, Information System Components, Business Process Modeling – Business Information System, Characteristics of Information System, Types of Business Information System -Organizational Structure, Systems Development Techniques and Tools, Role of System Analyst.	05	CO1
[2]	Technical, Operational and Financial Feasibility, Request Approval, Project Selection Requirement and Methods, Steering Committee, Information System Group, Scope, Boundary and Objective of the Project Undertaken.	07	CO2

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Explain the importance of structured approach of system analysis and design in software development.
CO2	Apply	Perform feasibility study for evaluating scope of the system and Practice software estimation for software project planning.
CO3	Understand	Understand the significance and practice to comply with ethics in system development.
CO4	Understand	Explain the structured approach of analysis and development.
CO5	Analyse	Prepare software analysis and design deliverables for specified requirements individually and in team.
CO6	Understand	Associate Project management principles and processes for lifelong software development practice.

MCA SEMESTER – II
SUBJECT : ANALYSIS AND DESIGN OF ALGORITHMS

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	125

A. COURSE OVERVIEW

The course provides important algorithmic design paradigms and methods of analysis. It will enable learners carry out analysis of various algorithms for mainly time and space complexity. It will make learners familiarize with specific algorithms for a number of important computational problems like sorting, searching, graphs etc. and introduce the concept of NP-complete problems.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Fundamentals of Mathematics: Role of Algorithms in Computing, Mathematics for Algorithmic Sets, Data Structures: Array, Stack and Queue, Pointers, Linked List, Graph, Tree, Associative Table	05	CO2
[2]	The Efficient Algorithm, Average, Best and Worst Case Analysis, Elementary Operation, Asymptotic Notations, A Notation for “The Order Of”, Analysing Control Structures: Loop Statements, Recursive Calls, Correctness of Algorithms, Sorting Algorithms and Analysis: Bubble Sort, Selection Sort, Amortized Analysis.	10	CO1 CO2
[3]	Introduction, Recurrence and Different Methods to Solve Recurrence, Multiplying Large Integers Problem, Problem Solving using Divide and Conquer Algorithm - Binary Search, Max- Min Problem, Matrix Multiplication.	09	CO3
[4]	Types of Graphs: Undirected, Unidirectional, Bidirectional Graphs, Traversing Graphs, Graph Search: Depth First Search and Breadth First Search.	05	CO3 CO4
[5]	Greedy Algorithm: Introduction and Characteristics, Spanning Tree, Minimum Spanning Tree: Kruskal’s Algorithm, Prim’s Algorithm, Shortest Path Algorithm.	09	CO3 CO4
[6]	Introduction, The Optimality Principle, Problem Solving using Dynamic Programming: All Points Shortest Path, Matrix Chain Multiplication, Longest Common Subsequence, Knapsack Problem.	10	CO4
[7]	Back Tracking: General Strategy, N-Queen’s Problem, Traveling Salesman Problem.	06	CO4
[8]	Basic Concepts: Non-Deterministic Algorithms, The Classes NP Hard and NP complete.	06	CO4 CO5

MCA SEMESTER – II
SUBJECT : RESEARCH METHODOLOGY

Teaching Scheme (Hours/Week)				Credits	Examination Scheme				
Lect	Tut	Prac	Total		Ext	Sess.	TW	Prac	Total
4	-	-	4	4	60	40	-	-	125

A. COURSE OVERVIEW

The purpose of this course is to let the learners understand methodology, processes and criteria for good research. The course covers various aspects of defining research problem and its design. Various methods about designing samples and data collection also are covered. The course also includes statistical data analysis techniques and aspects of writing basic research report.

B. COURSE CONTENT

NO	TOPIC	L+T (hrs)	COs
[1]	Meaning of Research, Objective, Motivation, Types, Approaches, Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, Problems Encountered by Researchers in India.	10	CO1
[2]	Introduction to Research Problem, Selecting the Problem, Necessity of Defining the Problem, Meaning of Research Design, Need for Research Design, Future of a Good Design, Important Concepts Relating to Research Design, Different Research Design, Basic Principals of Experimental Designs.	12	CO1
[3]	Census and sample survey, Implications of a Sample Design, Steps in sampling Design, Criteria of Selecting a Sampling Procedure, Characteristics of a Good Sample Design, Different Types of sample Designs, How to Select a Random Sample. Collection of Primary Data, Observation Method, Interview Method, Collection of Data through Questionnaires, Collection of Data through Schedules, Difference between Questionnaires and Schedules, Some Other Methods of Data Collection, Collection of Secondary Data, Selection of Appropriate Method for Data Collection.	12	CO1 CO2 CO3
[4]	Processing Operation, Types of Analysis, Statistics in Research, Measure of Central Tendency, Measure of Dispersion, Measure of Asymmetry, Measure of Relationship, Basic Regression Analysis, Multiple Correlation and Regression, Partial Correlation, Association of Attributes, Other Measures.	14	CO4
[5]	Meaning of Interpretation, Why Interpretation? Technique of Interpretation, Significance of Report Writing, Deferent Steps in Writing Report. Layout of the Research Report, Types of Report, Oral Presentation, Mechanics of Writing a Research Report, Precautions for	12	CO5

	Writing a Research Report.

4. B.L. Garg, Renu Kavdia, Sulochana Agrawal and U.K. Agrawal, *An Introduction to Research Methodology*; RBSA PUBLISHERS.

E. COURSE OUTCOMES

CO Number	Skill	Statement
CO1	Understand	Understand significance and general characteristics of research design
CO2	Apply	Contrast sampling design techniques
CO3	Understand	Differentiate data collection methods
CO4	Apply	Apply relevant basic statistical methods required for a given research design
CO5	Apply	Express data interpretation techniques and report writing
